PROFILE

Computer Science undergraduate at BINUS University with experience in machine learning, computer vision, NLP, and application development. Skilled in Python, HTML, CSS, Javascript, with experience developing AI powered applications and data driven systems through academic projects.

EDUCATION

BINUS University – School of Computer Science
Bachelor of Computer Science
GPA : 3.47

SKILLS

Programming: Python, Kotlin, C++
Machine Learning: PyTorch, Scikit-learn, XGBoost, Random Forest, Linear Regression
AI & Computer Vision: RoBERTa, LIME, OpenCV, Computer Vision, Image Processing
Data & Development: Pandas, NumPy, Streamlit, SQL
Android & API: Jetpack Compose, Google Cloud Vision API
Tools: Git, GitHub, Google Colab

PROJECTS

PsikisAI - Mental Health Text Insight
Python · RoBERTa · PyTorch · Streamlit · LIME

- Developed a Streamlit-based text classification application using fine-tuned RoBERTa to identify patterns across six mental health-related categories, with LIME-based explainability and batch analysis.

Smart Adaptive Traffic Light System
Python · OpenCV · Streamlit · NumPy

- Developed a computer vision system using classical image processing to detect and count vehicles across lanes and adapt traffic light duration based on vehicle density.

Laptop Price Estimator
Python · Scikit-learn · XGBoost · Pandas · Streamlit

- Developed a machine learning regression system to estimate laptop prices from hardware specifications, comparing Linear Regression, Random Forest, and XGBoost before deploying the model with Streamlit.

SplitEase - Collaborative Split Bill Android App
Kotlin · Jetpack Compose · Google Cloud Vision API

- Contributed to backend development and OCR integration using Google Cloud Vision API to extract receipt items and prices for automated bill splitting.
